

**Industry:** Chemical Processing

**Application:** Tank Washing

**Product Descriptions:** Tank washing lance with custom connections

**Situation:** A BETE customer needed to wash 48" diameter x 56" tall tanks and wanted to be able to quickly move his tank washing apparatus from one tank to the next. The tanks had 2" "Tri-clamp" connections for washing apparatus insertion and the customer's water supply lines had "Tomco" quick connections.

**BETE's solution:** BETE applications engineers sized the nozzle to the tank, selecting the RTW21, and found sources for the non-standard connections. BETE design engineers developed adapters where needed to incorporate the connections into the lance. The finished product provided one-stop shopping for a uniquely specialized product.
