Industry: Chemical Processing

Application: Material Injection

Product Descriptions: Wall Mount WL

Situation: A BETE customer had been purchasing 1/8" WLs in PTFE (Polytetrafluoroethylene) for some time. They were fabricating their own PTFE wall mount adapter for their process. While this work-around was satisfactory, they really wanted the nozzle/adapter to be of one-piece construction so that there was no risk of the nozzle falling into the process.

BETE's solution: BETE routinely creates custom products when the need arises. Wall-mounted nozzles are common. The customer had created a preliminary drawing of what they were looking for. BETE Design Engineers then designed a custom PTFE wall mount adapter for the WL nozzle based on the customer’s initial drawing.
